TECHNICAL SKILLS

Languages: Java, Python, C#, SQL, JavaScript, TypeScript, PHP
Frameworks: React, Angular, Next.js, Node.js, Tailwind CSS
Developer Tools: Git, Docker

EDUCATION

Concordia University <i>Bachelor of Computer Science</i>	Montreal, QC Sep. 2025 – Present
Vanier College <i>College Diploma (DEC) – Computer Science and Technology</i>	Montreal, QC May 2024

EXPERIENCE

Consultation SOS Front-End Developer	Jan. 2024 – May 2024 Montreal, QC
- Developed and deployed a full React.js website for the Tenkesalja Animal Welfare Protection Association through Consultation SOS. - Built key user-facing features including an animal adoption page, image hosting and galleries, and fully responsive layouts for showcasing available animals. - Implemented a contact form with email delivery, enabling visitors to directly submit inquiries to the organization. - Managed the production deployment and delivery of the completed website to the client.	

PROJECTS

Portfolio Website <i>Next.js, Tailwind CSS, Framer Motion</i>	Fall 2024
- Designed and deployed a responsive personal portfolio with Next.js and Tailwind CSS, achieving a perfect Lighthouse performance score through static generation and image optimization. - Engineered smooth page transitions and scroll-triggered animations using Framer Motion, reducing perceived load time and improving user engagement.	
Transportation REST API <i>PHP, REST, Agile, MySQL</i>	Fall 2024
- Architected and led a team of 4 in delivering a versioned PHP REST API for transportation data, following Agile sprint cycles with weekly deliverables. - Reduced redundant database load by implementing response caching and structured logging, improving API reliability and enabling faster debugging in production.	
Smart Home Dashboard <i>Raspberry Pi, Arduino, Python, Pydash</i>	Winter 2024
- Engineered an end-to-end IoT monitoring system integrating Raspberry Pi and Arduino with temperature, light-intensity, and RFID sensors feeding a live web dashboard. - Automated fan control based on real-time temperature thresholds, cutting manual intervention and demonstrating applied embedded systems and hardware-software integration.	
E-Commerce Platform <i>PHP, MVC, MySQL, Bootstrap CSS</i>	Fall 2023
- Developed a full-stack e-commerce web application in PHP following the MVC architectural pattern, simulating a complete online shopping experience with MySQL as the backend database. - Implemented user authentication (register, login, logout, password update) and a profile system with avatar support, product search, and public profile browsing. - Built a full cart system with add, remove, increment, and decrement functionality, a wishlist system allowing users to view and add others' wishlists to cart, and order ID generation on checkout. - Enforced secure database access practices throughout, protecting against common web vulnerabilities via parameterized queries and session management.
